

# SRVNAME - Name of RPC Server

This Natural profile parameter is for UNIX/OpenVMS and Windows platforms only.

**Note for mainframes:**

Use the keyword parameter SRVNAME of the NTRPC macro for static specification, or the subparameter with the same name of the profile parameter RPC.

It specifies the name of the RPC server, with which it registers on the node specified with the profile parameter SRVNODE.

SRVNAME is specified on the server side only.

|                                     |   |                    |
|-------------------------------------|---|--------------------|
| <b>Possible settings</b>            | 1 - 8 characters<br>1 - 192 characters (as of Natural RPC version 5.1.1 or above) | Valid server name. |
| <b>Default setting</b>              | none  |                    |
| <b>Dynamic specification</b>        | YES   |                    |
| <b>Specification within session</b> | NO  |                    |

**Note when using the Natural RPC Version 5.1:**

You may either specify a physical server name of up to 32 characters or a logical service name of up to 192 characters. In case of a logical service name, the SRVNODER must be set to \* (intentionally left empty).

**Example:**

```
SRVNAME='PRODUCTION_SERVER'  
SRVNAME='MY_LOGICAL_SERVICE,MY_SET'
```

For more details about Location Transparency and logical service names, refer to the EntireX documentation.

For additional information on Natural RPC, see the Natural Remote Procedure Call documentation.
